## Comments

Bar 2, 18: using the mixolydian #4 scale over C7 interprets the chord as tritone-substitution for F#7 (= secondary dominant V/V to B7). You can also use the altered scale (parent scale C#-MM, which is also the parent for the mixo #4 scale with respect to the tritone-substitute chord F#7) for some more tension.

Bar 3, 4 and 19, 29: Some Lead Sheets show B7#11, which requires mixolydian #4 (parent scale F#-MM) as corresponding scale.

Bar 7, 23: MM (dorian Δ7) provides a nice sounding scale alternative.

Bar 9, 10 and 25, 26: You can also use scales from the A-major parent scale (aeolian and dorian) as alternative.

The most commonly played ending is to repeat Bar 29-30 twice (without modulation), followed by the major tonic in bar 31.
